Listing of Claims:

Claims 1-15: (Canceled).

16. (Currently Amended) A wheelchair lift comprising:

a platform for carrying a passenger;

a lifting mechanism secured at one end to a vehicle and at the other end to the platform adjacent to an inboard end of the platform for moving the platform between a ground level position, a transfer level position and a vertically-stowed position, wherein the lifting mechanism comprises a vertical arm secured adjacent to the inboard end of the platform, the platform pivotable about an axis on the vertical arm;

a plate pivotally connected to the inboard end of the platform and moveable between a raised barrier position and a lowered bridging position;

a first linkage extending between a location on the vertical arm of the lifting mechanism and the platform for moving the platform from the transfer level position to the vertically stowed position; and

a second linkage extending between the plate and a location on the first linkage for moving the plate between the raised barrier position and the lowered bridging position,

wherein the lifting mechanism is movable to transfer force from the lifting mechanism to the platform to pivot the platform.

17. (Previously Presented) The wheelchair lift of claim 16 wherein the lifting mechanism comprises a parallelogram structure.

18. (Previously Presented) The wheelchair lift of claim 16 wherein the first linkage comprises a telescoping member.

19. (Previously Presented) The wheelchair lift of claim 16 wherein the first linkage comprises a pair of arms of unequal length and the second linkage comprises an actuator link pivotally extending between the longer arm of the pair of arms of the first linkage and the plate, the actuator link operable to move the plate between the raised barrier position and the lowered bridging position.

20. (Previously Presented) The wheelchair lift of claim 16 wherein the first linkage comprises a pair of arms of unequal length.

21. (Previously Presented) The wheelchair lift of claim 20 wherein a longer arm of the pair of arms is a telescoping member.

22. (Previously Presented) The wheelchair lift of claim 16 wherein the first linkage comprises a first arm extending from the lifting mechanism and a second arm extending from the platform.

23. (Previously Presented) The wheelchair lift of claim 22 wherein the second arm is a telescoping member.

24. (Previously Presented) The wheelchair lift of claim 23 wherein telescoping movement of the second arm moves the plate between the raised barrier position and the lowered bridging position.

25. (Previously Presented) The wheelchair lift of claim 24 wherein the second linkage comprises an actuator link extending between the second arm of the first linkage and the plate, the actuator link operable to move the plate between the raised barrier position and the lowered bridging position.

26. (Previously Presented) The wheelchair lift of claim 17 wherein contact between the first linkage and the parallelogram structure causes the plate to move between the raised barrier position and the lowered bridging position.

27. (Previously Presented) The wheelchair lift of claim 16 wherein movement of the lifting mechanism relative to the first linkage causes the plate to move between the raised barrier position and the lowered bridging position.

28. (Previously Presented) The wheelchair lift of claim 16 wherein the lifting mechanism acts upon the first linkage to move the plate between the raised barrier position and the lowered bridging position.

29. (Previously Presented) The wheelchair lift of claim 16 wherein the first linkage acts upon the second linkage to move the plate between the raised barrier position and the lowered bridging position.

30. (Previously Presented) The wheelchair lift of claim 29 wherein the lifting mechanism causes the first linkage to act upon the second linkage to move the plate between the raised barrier position and the lowered bridging position.

31. (Previously Presented) A wheelchair lift comprising:

a platform for carrying a passenger;

a lifting mechanism secured at one end to a vehicle and at the other end to the platform adjacent to an inboard end of the platform for moving the platform between a ground level position, a transfer level position and a vertically-stowed position, wherein the lifting mechanism comprises a vertical arm secured adjacent to the inboard end of the platform;

a plate pivotally connected to the inboard end of the platform and moveable between a raised barrier position and a lowered bridging position; and

a linkage coupled to the plate for moving the plate between the raised barrier position and the lowered bridging position, the linkage extending between a location on the vertical arm of the lifting mechanism and the platform for moving the platform from the transfer level position to the vertically-stowed position, wherein the linkage comprises a telescoping member.

32. (Previously Presented) The wheelchair lift of claim 31 wherein the linkage comprises a first arm extending from a location on the lifting mechanism and a second arm extending from the platform.

33. (Previously Presented) The wheelchair lift of claim 32 wherein the second arm is the telescoping arm.

34. (Previously Presented) The wheelchair lift of claim 33 wherein the telescoping movement of the second arm moves the plate between the raised barrier position and the lowered bridging position.

35. (Previously Presented) The wheelchair lift of claim 34 comprising an actuator link extending between the second arm of the linkage system and the plate, the actuator link operable to move the plate between the raised barrier position and the lowered bridging position.

36. (Currently Amended) A wheelchair lift comprising a platform for carrying a passenger, a lifting mechanism secured at one end to a vehicle for moving the platform between a ground level position, a transfer level position and a vertically-stowed position, the lifting mechanism having a vertical arm extending to and pivotably secured to the platform at an axis on the platform, a plate pivotally connected to the inboard end of the platform and movable between a raised barrier position and a lowered bridging position, a linkage extending between a location on the vertical arm of the lifting mechanism and the platform for moving the platform from the transfer level position to the vertically stowed position, and an actuator coupling the linkage and the plate, wherein the actuator transfers mechanical power directly from the linkage to the plate for moving the plate between the raised barrier position and the lowered bridging position.

37. (Previously Presented) The wheelchair lift of claim 36 wherein the linkage comprises a pair of arms of unequal length.

38. (Previously Presented) The wheelchair lift of claim 37 wherein the actuator is coupled to the longer arm of the linkage.

39. (Previously Presented) The wheelchair lift of claim 36 wherein the lifting mechanism acts upon the linkage to cause the actuator to move the plate between the raised barrier position and the lowered bridging position.

40. (Previously Presented) The wheelchair lift of claim 36 wherein the linkage acts upon the actuator to move the plate between the raised barrier position and the lowered bridging position.

41. (New) A wheelchair lift comprising:

a platform for carrying a passenger;

a lifting mechanism secured at one end to a vehicle and at the other end to the platform adjacent to an inboard end of the platform for moving the platform between a ground level position, a transfer level position and a vertically-stowed position, wherein the lifting mechanism comprises a vertical arm secured adjacent to the inboard end of the platform, the platform pivotable about an axis on the vertical arm;

a plate pivotally connected to the inboard end of the platform and moveable between a raised barrier position and a lowered bridging position;

a first linkage extending between a location on the vertical arm of the lifting mechanism and the platform for moving the platform from the transfer level position to the vertically stowed position;

a second linkage extending between the plate and a location on the first linkage for moving the plate between the raised barrier position and the lowered bridging position; and

a power source coupled to the lifting mechanism to move the lifting mechanism and pivot the plate.

42. (New) The wheelchair lift of claim 41 wherein the lifting mechanism comprises a parallelogram structure.

43. (New) The wheelchair lift of claim 41 wherein the first linkage comprises a telescoping member.

44. (New) The wheelchair lift of claim 41 wherein the first linkage comprises a pair of arms of unequal length and the second linkage comprises an actuator link pivotally extending between the longer arm of the pair of arms of the first linkage and the plate, the actuator link operable to move the plate between the raised barrier position and the lowered bridging position.

45. (New) The wheelchair lift of claim 41 wherein the first linkage comprises a pair of arms of unequal length.

46. (New) The wheelchair lift of claim 45 wherein a longer arm of the pair of arms is a telescoping member.

47. (New) The wheelchair lift of claim 41 wherein the first linkage comprises a first arm extending from the lifting mechanism and a second arm extending from the platform.

48. (New) The wheelchair lift of claim 47 wherein the second arm is a telescoping member.

49. (New) The wheelchair lift of claim 48 wherein telescoping movement of the second arm moves the plate between the raised barrier position and the lowered bridging position.

50. (New) The wheelchair lift of claim 49 wherein the second linkage comprises an actuator link extending between the second arm of the first linkage and the plate, the actuator link operable to move the plate between the raised barrier position and the lowered bridging position.

51. (New) The wheelchair lift of claim 42 wherein contact between the first linkage and the parallelogram structure causes the plate to move between the raised barrier position and the lowered bridging position.

52. (New) The wheelchair lift of claim 41 wherein movement of the lifting mechanism relative to the first linkage causes the plate to move between the raised barrier position and the lowered bridging position.

53. (New) The wheelchair lift of claim 41 wherein the lifting mechanism acts upon the first linkage to move the plate between the raised barrier position and the lowered bridging position.

54. (New) The wheelchair lift of claim 41 wherein the first linkage acts upon the second linkage to move the plate between the raised barrier position and the lowered bridging position.

55. (New) The wheelchair lift of claim 54 wherein the lifting mechanism causes the first linkage to act upon the second linkage to move the plate between the raised barrier position and the lowered bridging position.

56. (New) The wheelchair lift of claim 16 wherein the first linkage is pivotable with respect to the vertical arm.

57. (New) The wheelchair lift of claim 16 wherein the first linkage is pivotably coupled to the vertical arm.
